

# Trifork Handbook

You work at Trifork and this is your handbook. The handbook details how we work together, which processes we have established, and tools we prefer to work with. The handbook is a living document and will be updated often. Our business is constantly changing and this document should reflect that. The handbook is Open-Source and can be freely distributed to your friends and our clients, just remember to say where it came from. If you think parts of the handbook is outdated please do not hesitate to send us a pull-request on GitHub.

If you are looking for specific technical topics like recommended frameworks in NodeJS or Java, this is not the place for it. The handbook is general topics about our way of working with each other and our clients. You are welcome to make a dedicated handbook for technical topics. Just add them to our github account and link to them in the handbook.

There are a few MUST do items as well. They are there in the interest of keeping our standards high and ensure conformity with our in-house tools and deployment environments. They are all very
